

VISUAL Security

A new and innovative 3G GSM, PIR, camera alarm system. It combines 3 products, i.e. the PIR Detection Unit, the 3G GSM Communicator as well as the CMOS Camera, in one. The concerned 3G communications are fully independent connection, without any IP server provider in between. It is definitely a perfect DIY security product. Easily installed as a stand-alone unit or as the main unit of a wireless security system. If installed in the 3G-friendly environment, the device can be reached via a video call, allowing the user to access images from the site from anywhere in the world. A two-way communication feature is also possible.

- uses up to 10 devices of sensor/alarm.
- 4 kinds of alarm conditions: Burglary, Fire, Panic, and Tamper.
- Alarm notice via SMS and video call to connect the 3G phone of master.
- Edit formatted SMS; then send to the assigned phone number.
- 4 kinds of armed modes: AWAY/OFF/HOME/NOT ACTIVER.
- Remote : via the remote control or SMS to Arm / Disarm.
- Protection : Password enabled.
- Monitor via 3G Video call to view images.
- Report line : 4 phone numbers report emergency status.
- Recording upon PIR detection trigger, the camera records the condition.
